Dear Llew,

We have you down for this Thursday at 3pm to present “*The Effect of Beliefs About Dose During Tapered Dose Reductions: Modelling Withdrawal Processes in Heavy Caffeine Consumers*”. If you come over to our main building (R3, 22 King St Randwick) at around 2.40, I will take you over to where the presentation will be held. You can ask for me at the front desk. You can bring the talk on a memory stick or email it to me. How long is your presentation likely to be?

Shane Darke

Hi Shane and Richard

Richard thank you for the referral to Shane. Yes the 17th of August at 3pm suits me just fine.

The title of the presentation will be 'The Effect of Beliefs About Dose During Tapered Dose Reductions: Modelling Withdrawal Processes in Heavy Caffeine Consumers.'

What is the location of the seminar room?

All the best

Llew

Dear Llew, following on from Richard's email, I can offer you an in-house seminar spot for Thursday 17 August at 3pm. Our seminars are from 3-4pm. An in-house presentation is typically around 30 minutes (40 max), followed by questions. Can you let me know if you can do that time and a presentation title?

Best wishes,

Shane Darke

Dear Llew

I have a better suggestion to combine a meeting, with you giving a seminar at NDARC later this year.

I copied in Prof Darke who might be able to include you in the seminar series at NDARC.

Hi Richard and Laura

Thanks so much for the Introduction Laura.

As Laura mentioned I have nearly finished my PhD (submitting on September 4th) and am looking around for opportunities in the area of addiction research. Obviously NDARC is the peak organisation in this area. I have collaborated in a limited capacity with Tim Dobbins on a project for the Psychosocial Research Group at Prince of Wales clinical school, and really admire the work coming out of NDARC at the moment.

Basically my PhD looked at a method of reducing withdrawals in people tapering off a drug. It strikes me that though there have been many innovations in psychotherapeutic approaches to rehabilitation, and also several innovations in the pharmacology and delivery of drug replacements (e.g. Naltrexone, Suboxone) the actual method of conducting a dose taper has remained unchanged for almost 70 years (or more). I know you have been heavily involved in research into opioid substitution methods and would be interested in your thoughts.

I was wondering if you would be interested in having lunch some time in the next few weeks? I live very close to NDARC and although I am busily writing up the last few chapters of my thesis, my non-thesis schedule is quite free.

I have attached a new version of my resume (just had another article accepted for publication).

All the best

Llew
